DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 19, drawn to a digital camera for controlling autofocus by performing an interpolation process upon a plurality of evaluation values, classified in class 348, subclass 351.
- II. Claims 6-18 and 20, drawn to a digital camera for controlling autofocus by adjusting a diaphragm to a first aperture diameter smaller than a second aperture diameter when the change in evaluation value is less than a predetermined value, classified in class 348, subclass 347.

1. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a digital camera not capable of controlling autofocus by adjusting a diaphragm to a first aperture diameter smaller than a second aperture diameter when the change in evaluation value is less than a predetermined value. See MPEP § 806.05(d).

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2612

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
